

Casino Royale

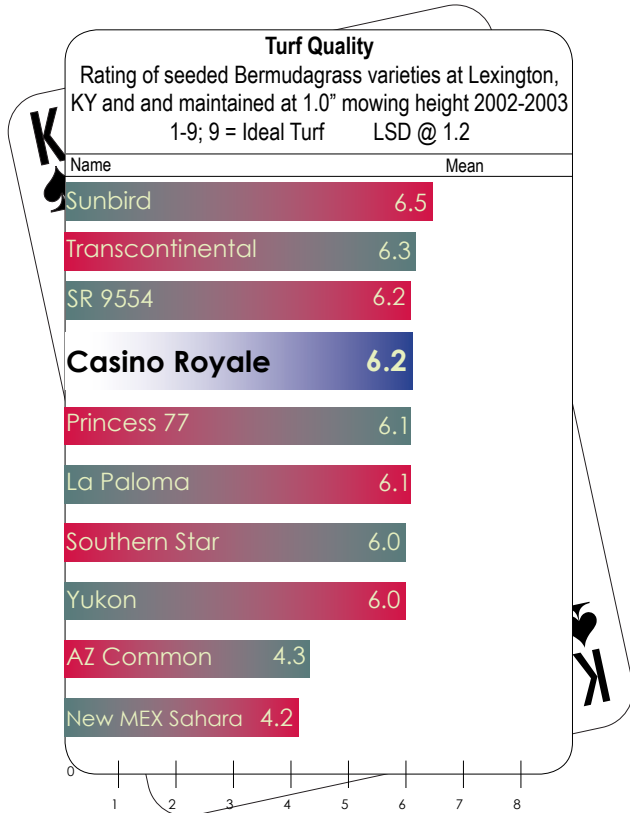

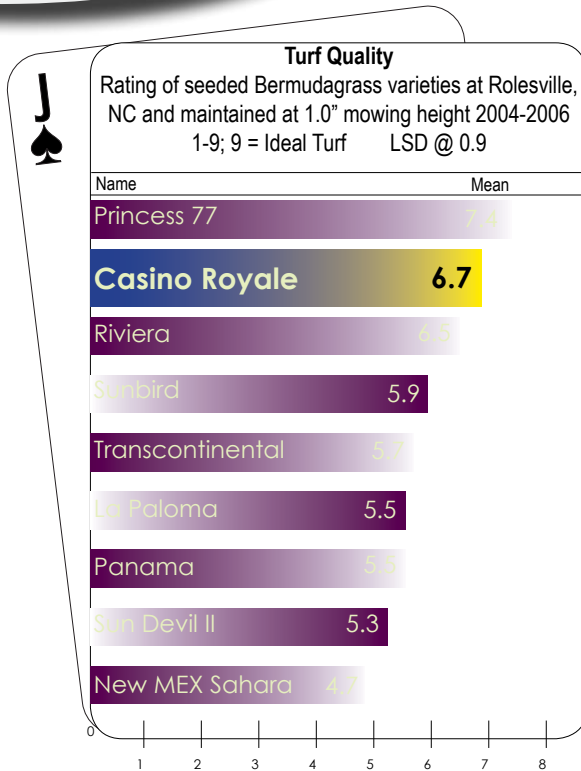

bermudagrass

BREEDER

Pure Seed Testing

DESCRIPTION

Casino Royale is a new and improved seeded bermudagrass derived from crosses of northern and southern adapted bermudagrass germplasm. Casino Royale provides improved turf quality, early spring green-up, uniform turf and significantly more dwarf growth than common bermudagrass. Casino Royale is dark green in turf color and predominantly rhizomatous in vegetative growth. This characteristic helps provide improved cold tolerance and durable sod strength.

APPLICATION

Casino Royale was developed as a low mowing turfgrass for utilization in temperate, sub-tropical and tropical climates where warm-season grasses are adapted. Casino Royale's improved cold tolerance makes it a superior choice for those colder temperate climates where improved cold tolerance is desired in seeded bermudagrass. Casino Royale can be successfully utilized in full sun on golf course tees, fairways, roughs and out-of bounds areas, athletic fields, parks, playgrounds and home lawns.

SPECIALTY GRASS DATA SHEET

CHARACTERISTICS

Growth Habit	Stolon Rhizome
Estab. Rate days	Fast 10-14
LHC Tol. 1/2"	Very Good 1/2"
Mowing Freq.	3x week
Traffic Tolerance	Excellent
Thatch Prod.	High
Comp. Mix	Poor
Nitrogen Req.	High 8 lbs*
Shade Tol.	Poor
Cold Tol.	Good
Drought Tol.	Excellent
Et. rate mm/day	Low. 6-7%
Endophyte	None
Salinity Tol. mmhos	28 Excellent

LHC=low height of cut, ET=evapotranspiration, N=Nitrogen, * per 1000 sq. ft., rates may increase or decrease based on location, soil type, irrigation practices, desired turf quality, humidity and other abiotic and biotic factors.
